

A real look at what we're building.

Prospkt is becoming an AI sales workflow for service businesses: leads, calls, bookings, and CRM memory.

The screenshot displays the Prospkt website interface. At the top, there's a navigation bar with links for Product, Use cases, Compliance, Pricing, Sign in, and a Start free button. The main content area features a large heading "Turn service leads into booked jobs with an AI sales rep that follows up." and a subheading "Agent system". Below this, a paragraph describes the workflow: "Prospkt finds, calls, follows up, books, and logs revenue opportunities for service businesses while the owner keeps control of campaigns, budgets, opt-outs, and every next step." There are two buttons: "Start building for free" and "See how it works". A central diagram shows the "Prospkt Agent" (Guarded AI rep, 20 calls / \$5 cap) connected to four main steps: Campaigns (Choose playbook), Qualifier (Check source), Caller (Follow up), and Booking (Book jobs). At the bottom, there's an "Activity log" section with a "Live" toggle and a "Guardrails" section with a checkmark. The activity log shows two entries: "08:33 Skipped consumer cold re... Consent missing" and "08:36 CRM memory updated Follow-up saved". The guardrails section lists "20 call cap", "\$5 spend cap", "DNC scrub", "Source notes", and "CRM memory".

The revenue layer service businesses are missing.

Jobber, ServiceTitan, and Housecall Pro can run the operation. Prospkt owns the sales motion around it: campaigns, calls, follow-up, booking, CRM memory, and owner control.

Campaign playbooks

Run the follow-up your team never gets to.

Choose a lane: missed call recovery, estimate follow-up, past customer reactivation, booking confirmation, review request, or sourced cold B2B. Prospkt applies the right script, source rules, and guardrails before anything dials.

Warm recovery for missed calls, forms, quotes, and past customers

Cold B2B for property managers, commercial accounts, and partners

Cold consumer is locked behind stricter compliance controls

Campaign queue

Warm first, B2B next

Record	Score	Value	Status
Missed call: Miller HVAC Warm recovery	9/10	•	Quoted
Old estimate: AJ Roofing Estimate follow-up	8/10	•	Called
Past customer: Westside Plumbing Reactivation	8/10	•	Recontacted
Property manager list Cold B2B	7/10	•	New
Booking confirmation Warm recovery	7/10	•	Booked

CRM memory

A service-sales workspace that remembers every opportunity.

Every contact has one CRM record with contact type, source, consent note, service need, service area, estimate value, lifecycle status, notes, calls, transcripts, follow-ups, DNC state, and booking context.

Service records for consumers, businesses, past customers, and commercial accounts

Lead drawer with source, service need, estimate value, notes, and call history

Pipeline, calls, bookings, and memory all read from the same record

Eastbrook Auto Care

What's next: make the rep feel inevitable.

More polish on the sales workflow,
real voice testing, and tighter handoffs
from lead → call → booked job.
